Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Tire Friction Coefficients and Their Relation to Ground-Run Distance in Landing For a turf field when wet, very little data are available. The values found do not appear to be conclusive and more information on this point is desired. Information is also lacking on the effects of high speed and of tire size on braking coefficients. The values given, with the exception of the data obtained from naca landing tests, are for automobile tires tested at speeds not exceeding 45 miles per hour. The evidence at hand, however, does not point to the likelihood of any radical changes in the general conclusions when these factors become known. Likewise, although reference I shows an increase in friction coefficient on wet concrete with a decrease in temperature, introduction of this factor would appear to constitute a refinement rather than a fundamental revision. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
