Brown Alumni Monthly, Vol. 11: June, 1910 to May, 1911 (Classic Reprint) (Hardback)

By Brown University

FBC LTD, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Brown Alumni Monthly, Vol. 11: June, 1910 to May, 1911 Could not the immense mass of water of Noah s ?ood have come from a source that was exhausted in producing the ?ood? In the formation of the earth, when in a fused condition, the more volatile elements must have been projected great distances from its centre. As the central mass condensed, it is conceivable that belts of lighter matter may have been left in space, like the rings of Saturn, at a distant point of equilibrium, but at a nearness where that equilibrium would ultimately be destroyed and this matter fall to the earth. Such belts would first be in the plane of the equator; and, if ever broken up, would do one of two things; either accumulate around a nucleus and form a moon in its orbit; or scatter over the dome of earth in mov ing towards the poles, where tangential force diminishes and gravity increases, and ultimately precipitate upon the earth. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more...

Reviews

These kinds of publication is everything and made me hunting ahead of time and more. I have got read through and i also am confident that i am going to gonna study yet again yet again later on. Its been printed in an extremely basic way in fact it is only after i finished reading this pdf in which in fact transformed me, alter the way i believe.
