Theclassics.Us, 2013. Paperback. Condition: New. Language: English . Brand New Book. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: .This can easily be illustrated by a simple experiment. If two substances, silver and sulphuric acid are brought into contact with each other, a force is generated, which can be induced in to a small pith ball by means of a copper wire. Similarly, charge with electricity another nicely balanced ball with the same kind of electricity and bring the two balls together. The two balls repel each other and fly apart. Now, instead of silver, dip zinc, we get another force of a similar nature, but exhibiting different properties and the two balls electrified by means of this process show an inclination not to meet each other but to fly away from each other as did the first set of balls. But if we bring a ball of the first electricity close to a ball of the second electricity, we at once observe a marked change in their behaviour. Instead of flying away from each other they attract one another, and remain in contact, until we separate them with the necessary force. Here we observe certain laws. Electricity generated by the contact of silver with sulphuric acid differs from electricity derived from zinc and sulphuric acid. The first kind of electricity is called Positive or North, and the second is called Negative or South electrify city. In the Universe, there is no object which is not pervaded by! this great physical agent called electricity, and in all objects, whether animated or not, we see positive and negative electricities combining together, only with this difference...
