

A Poison-Producing Bacillus Found in Ice-Cream and Cheese (Classic Reprint) (Paperback)

By Victor C Vaughan

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from A Poison-Producing Bacillus Found in Ice-Cream and Cheese Growth on gelatin. Stab-cultures in gelatin show a continuous growth along the needle track, and spread slightly about the point of inoculation on the surface. There is no liquefaction, and after twenty-four hours or longer one or more gas-bubbles may be seen along the line of growth. The surface growth is white, while that along the line as seen through the gelatin is yellowish. Shake tubes in gelatin begin to grow cloudy after from sixteen to twenty-four hours, and later numerous small gas-bubbles form. These bubbles grow larger for a few days and then gradually disappear. On gelatin plates the colonies show considerable variety of form many are round, others are oval, and some quite irregular in outline. The superficial colonies appear granular and spread about a more dense nucleus. Blue litmus gelatin soon becomes red and cloudy; later, the color wholly disappears. Growth on agar. On ordinary agar in inclined tubes the growth spreads over the surface, and has a white, slightly glazed appearance. Stab-cultures grow well along the line and spread...
