Neuroinflammation in Stroke

By Dirnagl, Ulrich / Elger, Bernd

Condition: New. Publisher/Verlag: Springer, Berlin | Stroke is a major cause of death and disability in industrialized countries. To date, the medical need of efficient therapy for this devastating cerebrovascular disorder remains unmet. During the last decades, the development of pharmacological stroke therapies was aimed at improving patient outcome by restoration of cerebral blood flow or protection from acute neuronal cell death. Almost all of The participants of the workshop VI Preface these approaches targeted the very early events after vascular occlusion. However, primarily for logistical reasons, only a small portion of strokes can be treated within 6-10 h after the insult. In recent years it has been recognized that stroke pathophysiology is a dynamic process, and that delayed processes, which occur during the days and weeks following arterial occlusion, may lead to further deterioration or to impairment of recovery and rehabilitation in subacute and chronic stages. Evidence is accumulating that neuroinflammation is a major player in these delayed pathophysiological processes. While some components of neuroinflammation such as removal of cell debris and release of trophic factors may support recovery processes, others such as the generation of free radicals and other cytotoxic mediators are deleterious...
