EXPERIMENTAL AND THEORETICAL INVESTIGATION OF LOW - TEMPERATURE IGNITION IN A LAMINAR FLOW REACTOR

Cuvillier Verlag Nov 2011, 2011. Taschenbuch. Condition: Neu. Neuware - The main purpose of this dissertation is to investigate low-temperature ignition in detail. In the previous findings with conventional fuels such as diesel, gasoline, or jet fuels, first- and second-stage ignitions are observed in the negative temperature coefficient regime due to high- and low-temperature chemistry (LTC and HTC). As results from these investigations have shown, it is well-known that this temperature regime has high potential to reduce emission in applications....
