Brand New Book ***** Print on Demand *****.Excerpt from On the Conformal Representation of Plane Curves Particularly for the Cases $P = 4, 5,$ and 6 In order to do this we must classify surfaces according to their deficiencies and treat each class separately. In the case $p=0$ there are no cuts on the surface and no integrals of the first kind. Integrals of the second kind exist on all surfaces. Let us select one of these, w , which has a single algebraic infinity. The function w being of weight one assumes one and only one value corresponding to each point of the n -leaved surface $F(x, y) = 0$. These values, real and complex, may be represented by the points in a plane by the ordinary representation of complex numbers. The given n -leaved surface can then be conformally represented upon a plane by means of the real and complex values assumed by w . If $p = 1$ two cuts are required to make the surface simply connected. We know that on any surface of deficiency p , there exist p linearly independent integrals of...
