A CLINICAL CONSIDERATION OF SIXTY CASES OF CEREBRAL PARALYSIS IN CHILDREN (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from A Clinical Consideration of Sixty Cases of Cerebral Paralysis in Children As this paper is only a resume, at best, no summary need be given more than to call attention to two or three practical points that seem to be evident. First, the great gravity of the prognosis of hemiplegia in childhood as regards mental enfeeblement, epilepsy, and possibly the transition to spastic paralysis. Again, that the influence of the difficulty of labor in the production Of these cases has been very much overestimated. That the tendency of cases of spastic hemiplegia is to improve, with or without treatment. And lastly, that the existence of primarily Spinal spastic paralysis in the child has yet to be proved anatomically, as well as the existence of the poliomyelitis of Striimpell.
