

Streamflow Characterization at Zion National Park, Utah (Classic Reprint) (Paperback)

By Gustavo E Diaz

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Streamflow Characterization at Zion National Park, Utah The purpose of this study is to provide a comprehensive description of the hydrological characteristics of surface runoff at Zion National Park and surrounding watersheds. The analysis is focused mainly on the North Fork of the Virgin River which traverses across the most popular portion of the National Park. The study is also extended, although in less detail, to other streams in the area such as the East Fork of the Virgin River, La Verkin Creek, North Creek, and Kolob Creek, all part of the same hydrologic region. The discussions presented in this report are aimed at providing the reader with an in-depth understanding of the structure of surface flow in the region, as well as the causal factors for their characteristics. Time series of surface runoff are analyzed at annual, monthly, and daily time intervals. The narrative description of the findings is accompanied by several graphs and tables. The report is organized in the following manner. Chapter 2 defines the general area of interest for the study and provides basic physical information of...
