NUMERICAL MODELS FOR DIFFERENTIAL PROBLEMS (MSA)

Springer. Paperback. Condition: New. 658 pages. In this text, we introduce the basic concepts for the numerical modelling of partial differential equations. We consider the classical elliptic, parabolic and hyperbolic linear equations, but also the diffusion, transport, and Navier-Stokes equations, as well as equations representing conservation laws, saddle-point problems and optimal control problems. Furthermore, we provide numerous physical examples which underline such equations. We then analyze numerical solution methods based on finite elements, finite differences, finite volumes, spectral methods and...

Reviews

This created ebook is wonderful I am quite late in start reading this one, but better then never. You may like the way the author compose this pdf.

-- **Frederic Lang**

The book is fantastic and great. It is loaded with knowledge and wisdom You are going to like the way the article writer create this ebook.

-- **Amaya King**

A fresh e-book with a brand new standpoint. Sure, it is play, nevertheless an interesting and amazing literature. Its been printed in an extremely straightforwrad way and it is just soon after i finished reading this pdf where in fact modified me, change the way in my opinion.
