Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Structure and Properties, of the More Common, Materials of Construction The second part of the book deals with the nature of the internal structure of materials and the control of properties through the control of the internal structure. This part of the book becomes a short study of theoretical and applied metallography. Realizing, however, that the scientific language of metallography might scare the student into thinking the subject more difficult and complicated than it is, care has been used to present the principles of physical chemistry concerned in simple words, and with many diagrams to make relations clear. Certain parts of the book are, so far as the author is aware, either entirely new or have never before been given in similar detail. Such are the general analysis for finding of true stresses after the yield point in torsion and transverse loading; and the detailed description and explanation of heat treatment from the standpoint of physical chemistry. The new method for torsion and transverse test analysis may clear up the controversies concerning Guest's law or other laws for conditions of failure in combined loadings, and may make the tests of ductile metals in direct shear unnecessary. The new analysis of the general nature and of the detail of heat treatment, presented mathematically and in diagrams, already throws much light upon the problems, and may be the beginning of a complete theory. Particular thanks for assistance in the composition of the book, criticism of the text, etc., are due to Mr. W. R. Wigley and Mr. W. J. Diederichs. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book...
