Excerpt from Respiratory Care, Vol. 35: A Monthly Science Journal; August, 1990 Because the utility of nsi appears to be question able, and because the only clinical data available were obtained in postoperative patients without apparent pulmonary disease, we designed a controlled study of nsi in patients with known pulmonary disease who required frequent suctioning. The specific purpose of this study was to assess the effect of suctioning with and without nsi on: (1) the amount of material suctioned, (2) gas exchange, (3) respiratory system mechanics, (4) cardiovascular function, and (5) patient comfort.
