Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Natural Science, Vol. 1: A Monthly Review of Scientific Progress; September, 1892 The two addresses agree that the great mountain ranges of the world, whether above water or below them, had their foundations laid in the pre-geologic era Of the solidifying globe, as the later crustal movements seem to have followed the original lines of weakness; and this not only applies to the great meridional chains, but to the intersecting east and west lines, such as the mediterranean-caribbean depression and the corresponding alpine line of elevation, which dates at least from Palaeozoic times. Similarly they both conclude that the oceanic islets of the Pacific indicate an area of subsidence, and the submerged ridge of the land area there once cut up the Pacific Ocean, as the probable connection of the Atlas with the Venezuelan Cordillera once broke the continuity of the Atlantic. It, therefore, seems probable that the new stratigraphers will allow the palaeontologists the principal transoceanic bridges that they demand. Professor James Geikie suggests that the cosmopolitan distribution of Palaeozoic species was really due to the absence Of any oceanic abysses to bar the spread Of littoral species. We thought it was now pretty generally understood that the supposed identity of, for example, the Carboniferous faunas Of the world, was simply due to the diagrammatic figures Of the European species having led to essential distinctions being ignored and species wrongly identified; closer study has shown that such world-wide faunas are myths, and that we have the same cases of some Palaeozoic faunas common to the two sides of the Atlantic, with succeeding ones that are as sharply differentiated as any of later date. The study Of extinct faunas...
