

Smaller chemical analysis

Filesize: 4.04 MB

Reviews

The publication is easy in read better to understand. It is writter in basic words and phrases rather than hard to understand. You wont truly feel monotony at anytime of your respective time (that's what catalogues are for about if you question me).
(Kaya Rippin)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 edition. Excerpt: . . . CHAPTER VI REACTIONS OF THE METALS OF GROUP Mb Manganese, Mn Dry Reactions. --Manganese compounds, when heated in a borax bead in the oxidising flame, impart to the bead a violet or lilac colour. When heated in the reducing flame, the bead again becomes colourless. A more characteristic reaction is to fuse the manganese compound with KH_2O , or with Na_2O_3 and a little KN_3 or KC_2O_3 upon a piece of platinum foil; the manganese undergoes oxidation, and a deep green-coloured mass is obtained, consisting of manganates of the alkali metals-- $\text{MnO}_2\text{Na}_2\text{CO}_3$ (from KC_2O_3 or KN_3) $\text{Na}_2\text{MnO}_4\text{CO}_2$ Wet Reactions. --Of the common manganous salts, the chloride, $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$, and the sulphate, $\text{MnSO}_4 \cdot 5\text{H}_2\text{O}$, are soluble in water. In the crystallised state they have all a pink colour. Manganous salts which are soluble in water do not undergo atmospheric oxidation. NH_4HO , KH_2O , and NaHO produce a white precipitate of manganous hydroxide, $\text{Mn}(\text{HO})_2$. Insoluble in excess of the reagent, the precipitate quickly absorbs oxygen, and is converted into hydrated manganic oxide, $\text{Mn}_2\text{O}_3 \cdot \text{H}_2\text{O}$, having a brown colour. Freshly precipitated $\text{Mn}(\text{HO})_2$, while still white, is soluble in NH_4Cl ; therefore in the presence of NH_4Cl , manganous hydroxide is not precipitated by NH_4HO , and only incompletely by KH_2O or NaHO . The ammoniacal solution of the double chloride, however, is capable of absorbing oxygen just as the precipitated $\text{Mn}(\text{HO})_2$. 1 The manganic salts are extremely unstable in solution, and do not exist under the ordinary conditions of analysis. does, and the liquid quickly...
