Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .and in the field to the study of the pit privy and its relation to soil and well pollution. During the second year the question of viability of bacteria in soil, feces, pit, and septic material, and the factors controlling it were studied in the laboratory, while in the field the septic privy and an experimental pit formed the subjects of investigation. In the course of these inquiries some attention was also given to the pail and chemical types of closets, but neither of them was studied as intensively as the pit and septic privies. The present researches naturally assumed two phases, the laboratory experiments on the one hand, and the field studies on the other. It appears, therefore, logical to present the results of these studies independently and then attempt to correlate them. LABORATORY EXPERIMENTS. Viability of *B. typhosus* and *B. dysenteries* in Fecal Matter.--Although there are data in the literature bearing on this point, it seemed desirable to repeat the tests in order to confirm and possibly extend previous observations. Typhoid carrier stools as well as normal stools mixed with 24 hour broth cultures of typhoid and dysentery bacilli, respectively, were used in testing the viability. In order to determine the effect of the condition of the stool, tests were made with liquid and solid emulsions. The stools were kept in cork-stoppered vials of about 2 ounce capacity at laboratory temperature, ranging from 68-75F. (20-24C). Samples of the feces were examined at 24 or...
