Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914-01-01 Excerpt: .to have retained phosphorus on an intake of 0.861 gm. P, but on a greater number of days there were losses of phosphorus greater in magnitude than the previously mentioned storage. We must conclude therefore, that under his conditions 0.861 gm. P was an insufficient amount. The calcium balances were negative, and the nitrogen balances positive. R. Tigerstedt (1911) studied the composition of the freelychosen food consumed by 64 persons ranging in age from 2 years to maturity. Some of his results are set forth in the following table. AVERAGE DAILY CALCIUM, MAGNESIUM AND PHOSPHORUS OF THE FREELY CHOSEN DIETS OF HUMAN BEINGS OF VARIOUS AGES Grams Tigerstedt states his opinion that the P205 intake, in order to maintain the phosphorus balance, should be from 2.0 to 3.5 gm. per day. From his investigations it appears that the adult man s diet contains more than this amount (mean 4.33 gm.), while adult women at moderate labor consume 3.57 gm. daily. The phosphorus values varied within wide limits (P for men 2.80-6.01 gm., women, 1.69-4.26 gm.). PHOSPHORUS REQUIREMENTS OF INFANTS In connection with their study of rice as the cause of beriberi, Aron and Hocson (1911a, 1911b) report the following experiments with healthy men. PHOSPHORUS BALANCES ON HEALTHY MEN (1) Red rice, that is, only hulled. (2) White rice, overmilled. (3)–0.09 according to our calculations. Authors conclusions: An intake of 1.65 gm. P206 per 50 kg. body weight, or less, does not cover the body requirement. The...
