Sources of Powerplant Cooling Water in the Desert Area of Southern California Reconnaissance Study (Classic Reprint) (Paperback)

By California Department of Water Resources

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Sources of Powerplant Cooling Water in the Desert Area of Southern California Reconnaissance Study The committee assumed that most of the power requirements would be met by sea shore plant sites where seawater would be used for cooling. Concerns about the marine environment, the esthetics of coastal plants, earthquake hazards, and various other environmental aspects have created a need to consider inland power plant sites. Thermal powerplants require small quantities of water of good quality heated to produce steam. The steam is used to run a turbine that drives a generator, thus producing electricity; Large quantities of cooling water are required to condense the steam so that it can be recycled through the system. Inland power generation will probably require between and acre-ft of cooling water annually by the year 1990 (California Department of Water Resources. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work.
