Excerpt from Journal of Genetics, 1917-1918, Vol. 7 Due to the efforts of many able and earnest workers the approximate end breeding results in numerous groups of plants and animals may now be predicted. If the ancestry of parents for one generation be known the characters and ratios of a resulting complex progeny may be approximately prognosticated. AS well also may the characteristics of parents of unknown ancestry be analyzed by the appearance and ratios of their offspring. Although there is an approach to agreement in the matter of end results one finds wide diversity of judgment regarding the fundamental causes. Most, if not all Mendelians consider the proof of the segregation of the germ plasm as an insulated substance in embryonic development adequate. It is considered a fundamental principle that the units contributed by two parents separate in the germ cells of the offspring without having had any influence on each other. The ideas of the definite location in the chromosomes of the factors giving rise to characters and explaining Mendelian phenomena by means of the manoeuvres...
