RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Original publisher: Washington, D. C. : National Aeronautics and Space Administration, 1986 OCLC Number: (OCoLC)220880414 Subject: Nickel alloys. Excerpt: . . . plane, (2 which is the main slip plane of sample H22 off-axis from the 001 axis), wherein dislocation groups which are nearly-101 0-11 parallel to the or axes are visible, as well as in 11 3, other planes within and dislocation reaction has been 1 1 a started through cross-slip. Regions high dislocation density of between gamma phases and since gamma phase are the s p a c e s cuboids are naturally arranged in a lattice-form, these regions are formed into nearly perpendicular bands. Meanwhile, several extended dislocation contrasts were observed among the gamma it phases in observation from the direction of the 001 axis, and was established that each phase had nearly independently deformation hardened, allowing the substance resistance to creep deformation. seen also in the Schmid factor mapping (Figure As (i1113 112 7), 1113 110 and slip is relatively easy, but from the areas near the boundaries the triangles, it believed of is from that multiple...
