

## Plant Sensing and Communication Interspecific Interactions

By Richard Karban

University Of Chicago Press. Paperback. Condition: New. 240 pages. The news that a flowering weed mouse ear cress (*Arabidopsis thaliana*) can sense the particular chewing noise of its most common caterpillar predator and adjust its chemical defenses in response led to headlines announcing the discovery of the first hearing plant. As plants lack central nervous systems (and, indeed, ears), the mechanisms behind this hearing are unquestionably very different from those of our own acoustic sense, but the misleading headlines point to an overlooked truth: plants do in fact perceive environmental cues and respond rapidly to them by changing their chemical, morphological, and behavioral traits. In *Plant Sensing and Communication*, Richard Karban provides the first comprehensive overview of what is known about how plants perceive their environments, communicate those perceptions, and learn. Facing many of the same challenges as animals, plants have developed many similar capabilities: they sense light, chemicals, mechanical stimulation, temperature, electricity, and sound. Moreover, prior experiences have lasting impacts on sensitivity and response to cues; plants, in essence, have memory. Nor are their senses limited to the processes of an individual plant: plants eavesdrop on the cues and behaviors of neighbors and for example, through flowers and fruit exchange information with other types...
