Reviews

This is basically the finest publication i actually have go through till now. We have read and i also am confident that i am going to likely to read through again once more in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.

LAP Lambert Academic Publishing, 2017. Paperback. Condition: New. Aufl. Language: English . Brand New Book. A complex approach to the study of polycrystalline structures of biological objects based on a combination of laser polarimetry and laser-induced autofluorescence was considered. A model of the formation of polarization-inhomogeneous autofluorescence images of histological sections of biological tissues and polycrystalline films of biological fluids of human organs of different morphological structure and physiological state was proposed. The results of studies of the statistical, correlation and fractal structure of polarization-inhomogeneous autofluorescence and Muller-matrix images in various spectral ranges were presented. Diagnostic criteria for changes in the optical anisotropy of biological layers associated with various types of pathology were determined. For students, post-graduate students, tutors and researchers working in the field of biomedical optics and diagnostics, biology, medicine.
