Springer. Paperback. Condition: New. 480 pages. Dimensions: 9.0in. x 6.1in. x 1.0in. The Symposium on The Influence of Polymer Additives on Velocity and Temperature Fields was proposed to the General Assembly of the International Union of Theoretical and Applied Mechanics (IUTAM) by the Gesellschaft für Angewandte Mathematik und Mechanik (GAMM). The Symposium was held under the auspices of IUTAM in association with the Deutsche Rheologische Gesellschaft (DRG) with responsibility for the organization lying with B. Gampert (Universitat-GH-Essen). The main aim of this IUTAM Symposium was to consider the fundamental aspects of the phenomena that occur when small amounts of polymers are added to turbulent flows (turbulent drag reduction) and laminar porous media flows. In particular attention was devoted to - the influence of molecular parameters of the polymers and solution properties, especially the elongational viscosity, on turbulent flow and laminar porous media flow; the influence of polymers on the turbulence structure in polymer drag reduction. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
