

Higher Mathematics Volume III: Physical class

By WEN LI

paperback. Condition: New. Ship out in 2 business day, And Fast shipping, Free Tracking number will be provided after the shipment. Pages Number: 348 Publisher: University Press Pub. Date :2004-8-1. This book includes an infinite series. including parametric integral. Fourier series and Fourier integral and ordinary differential equations and so on. Scattered and difficult content. typical examples of basic geometric theorems highlighting their significance. physical background and practical applications. Contents: Chapter XIV of several infinite series 1 series 2 the concept and nature of the convergence of positive series any items Criterion 3 Criterion 4 the convergence of series absolutely convergent nature of the number of items 5 series 6 power level function Taylor series number 7 CHAPTER 8 Euler integral of 1 with parametric variables often defined with reference points 2 points with parametric generalized Fourier series and Fourier Chapter XVI 1 Fourier integral 2 plural form of Fourier series Fourier series Fourier series generalized About 3 4 5 Fourier integral Fourier transform of the fundamental nature of Chapter XVII of ordinary differential equations the basic concepts of differential equations 1 2 3 a first-order differential equations order differential equations of the existence and uniqueness theorem of second order linear...
