Modeling and Analysis of Information Technology Systems

By Sztrik, János

Condition: New. Publisher/Verlag: GlobeEdit | Modern information technologies require innovations that are based on modeling, analyzing, designing and finally implementing new systems. Modern info-communication networks are one of the most complex systems where the reliability and efficiency of the components play a very important role. For the better understanding of the dynamic behavior of the involved processes one have to deal with constructions of mathematical models which describe the stochastic service of randomly arriving requests. The aim of the book is to present the basic methods, approaches in a Markovian level for the analysis of not too complicated systems. The main purpose is to understand how models could be constructed and how to analyze them. It is assumed the reader has been exposed to a first course in probability theory, however in the text I give a refresher and state the most important principles I need later on. My intention is to show what is behind the formulas and how we can derive them. It is also essential to know which kind of questions are reasonable and then how to answer them. | Format: Paperback | Language/Sprache: english | 181 gr | 220x150x7 mm | 124 pp.

Reviews

This pdf can be worth a read through, and a lot better than other. I really could comprehend everything using this written e book. I am just pleased to explain how this is actually the very best book i have read through in my individual lifestyle and can be the very best publication for actually.

-- **Jaclyn Price**

Very good electronic book and useful one. it absolutely was written extremely completely and useful. You will not feel monotony at any moment of your respective time (that's what catalogs are for relating to when you question me).
