BUILDING BRIDGES IN ABSTRACTION-BASED CONTROLLER SYNTHESIS

[DOWNLOAD](#)

Epubli. Taschenbuch. Condition: Neu. Neuware - Abstraction based controller synthesis is a well established two-step procedure to solve complex control problems involving discrete valued quantities. First, a symbolic abstraction of the system to be controlled is generated providing a discrete time model with a finite, discrete valued signal space and finitely many states. Second, a symbolic controller for a desired symbolic specification is constructed using the previously generated symbolic model. This controller synthesis approach is usually used in two different settings. Either (i) the specification is naturally given by a Linear Temporal Logic (LTL) or a Computation Tree Logic (CTL) formula over a finite set of symbols, which can only be encountered by symbolic controller synthesis techniques. Or (ii) the system to be controlled is naturally equipped with a finite set of external symbols through which it interacts with its environment, e.g., the controller. 184 pp. Englisch.
