By Dan Woods

O'Reilly Media, Inc, USA, United States, 2003. Paperback. Condition: New. Language: English . Brand New Book. Modern corporate computing environment is too often characterized by silos of data in enterprise applications like ERP, CRM, and supply chain management. Integrating these applications involves hardwiring connections between them, often resulting in a rigid and inefficient IT infrastructure. Packaged Composite Applications (PCAs) are an innovative answer to this dysfunctional scenario. Originated by SAP, one of the world's foremost technology companies, PCAs represent a new architectural paradigm for enterprise computing. Using Web services, they combine new functionality with services from existing applications to enable flexible, cross-functional automation. But is this new model right for your business? That's where this book comes in. It is the result of a systematic search through the brain trust of SAP for all of the relevant arguments, examples, concepts, and analogies related to Packaged Composite Applications. The book combines the approach of a forward-looking analyst with the perspective of an executive who must make things work, without skimping on the relevant technical details. The author examines the ideas driving PCAs forward in the marketplace and the problems and solutions that an executive and technologist will encounter in...

### Reviews

*I just started out reading this pdf. It is full of wisdom and knowledge You are going to like just how the blogger publish this publication.*

*Simply no phrases to clarify. It is really basic but surprises from the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*
