Science has always been a daunting topic, but one field has never failed to fascinate people. From the moment life on Earth began, it has slept beneath the gaze of hundreds of little balls of light in the night sky, and a Moon that very noticeably changes its shape. For as long as people have been around, they could not help but notice the movements of the stars in the sky, the Moon s phases, and the coming of eclipses and comets hundreds of thousands of years before anyone determined what these bodies were. At its most basic, astronomy is the study of the objects in space, which goes at least as far back as written history, beginning with the Sumerian and Babylonian civilizations in the 4th millennium B.C. Ancient civilizations were mystified by the stars and planets that they saw every night, and they attached religious and mythological importance to them, making it all the more important to closely track their movements. The Babylonians became the first recorded civilization to create a solar calendar, measuring time by the...
