

Report of the International Ice Patrol in the North Atlantic: 2002 Season (Classic Reprint) (Paperback)

Filesize: 3.76 MB

Reviews

This sort of ebook is every thing and made me hunting forward and a lot more. I have read through and i also am confident that i am going to going to go through once again once more in the foreseeable future. I discovered this publication from my dad and i encouraged this book to discover.

Forgotten Books, United States, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Report of the International Ice Patrol in the North Atlantic: 2002 Season Comparing the 2001-2002 sea ice and iceberg observations to the historical record emphasizes the departures from normal and gives a greater appreciation for the variability of the ice distribution in the western North Atlantic. For sea ice, Sea Ice Climatic Atlas, East Coast of Canada, 1971-2000 (Canadian Ice Service, 2001) provides a 30 year median of ice concentration at seven day intervals for the period from November 26 through July 16. Viekmann and Baumer (1995) present an iceberg limits climatology from mid-March to July 30 based on 21 years of Ice Patrol observations from 1975 through 1995. They provide the extreme, median, and minimum extent of the Limit of All Known Ice for the period. Finally, the average number of icebergs estimated to have drifted south of 48°N for each month was calculated using 102 years (1900 through 2001) of HP records. The pre-season sea ice forecast (Canadian Ice Service, which was issued in early December, predicted: one week later than normal freeze-up along the Labrador coast and in east Newfoundland waters due to slightly above normal air and sea surface temperatures in the region, movement of the ice edge into the Strait of Belle Isle during the first week of January 2002, sea ice reaching Cape Bonaville during the second week of February, maximum extent of the sea ice attained in mid-March, with the ice edge approximately at the latitude of St. John's for the entire month, and normal retreat of the southern ice edge in the spring. A series of six reconnaissance flights conducted in mid-October documented a population of 825 icebergs from 61°N to...
