

Development of Molecular Markers for chromosome 5A of common wheat

Filesize: 1.29 MB

Reviews

The best pdf i at any time read. It is one of the most remarkable ebook we have read through. You wont really feel monotony at anytime of your own time (that's what catalogs are for concerning should you check with me).

DEVELOPMENT OF MOLECULAR MARKERS FOR CHROMOSOME 5A OF COMMON WHEAT

[DOWNLOAD](#)

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Development of RAPD-Based Molecular Markers for Chromosome 5A of Common Wheat | Common (bread) wheat is an allohexaploid species (*Triticum aestivum* L.) with 3 compensating genomes AABBDD ($2n=6x=42$ chromosomes). Traditionally genetic and physical mapping in this most important cereal crop has been based on molecular markers (RFLPs, PCR, Insitu hybridization etc). The recent development in producing deletion lines of common wheat (using *Aegilops cylindricum* genome) has revolutionized the physical mapping of wheat chromosomes. During present study, deletion lines of chromosomes 5A of common wheat were used to identify RAPD (Randomly Amplified Polymorphic DNA) based molecular markers specific for short and/or long arm of chromosome 5A. Out of the 7 RAPD primers used, OPA-07 showed useful polymorphism for long arm deletion lines viz; del5AL-10 and del5AL-23. By comparing the C-banding karyotype of the deletion lines, it is inferred that the primer (OPA-07) anneals to the distal half of the long arm of chromosome 5A. | Format: Paperback | Language/Sprache: english | 56 pp.
