RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 80 pages. OCLC Number: 53121460 Excerpt: . . . For the risk-informed review, the licensee would make an initial screening risk calculation and submit this to NRC with a request for approval of the change. The first step of the risk screening evaluates the full modification including both equipment and HAs and conducted using the NRCs RG 1. 174 directly. Risk calculations include the change in risk or core damage frequency (CDF) due to the full modification () CDF) that includes the HA. This assessment may determine that the full modification, including the mod HA, is in Region III (the low risk region). If so, then in some cases the only NRC review that is necessary, is to evaluate whether there is a valid technical basis for the low risk. The risk screening calculations also consider whether the proposed change is permanent or temporary. If temporary, the screening includes considering the length of time that it will be in place. Then, the method assesses the integrated risk due to the change or modification over the time that it will be in place (or the integrated conditional core damage probability-ICCDP). Similar calculations would be performed for large early release frequency (LERF) where appropriate. The second step of the risk screening focuses on the risk importance of the HA. This step uses both the Risk Achievement Worth (RAW) and the Fussell-Vesely (FV) risk importance measures to determine the risk significance of the HA. This step identifies the effect on risk of failing to perform the HA (using the RAW) and the relative contribution to risk of the action (using the FV). Uncertainty...
