This pdf is definitely worth getting. Better then never, though i am quite late in start reading this one. It is extremely difficult to leave it before concluding, once you begin to read the book.

Excerpt from Asymptotic Solution of Systems of Linear Ordinary Differential Equations With Discontinuous Coefficients In this system the coefficient matrix k_a depends upon a real parameter k . Asymptotic expansions of u in powers of k^{-1} , which are valid as $k \rightarrow \infty$ are well known. They hold provided that A has continuous derivatives of all orders and satisfies certain other conditions. But if some derivative of A is discontinuous, then only a finite number of terms in the expansion of u are known. We consider the problem of finding additional terms when A and its derivatives have finite jump discontinuities. We shall show how to solve this problem, and we shall find explicitly the next term beyond those previously known. This term is discontinuous, whereas the preceding terms are all continuous. This fact is significant in various applications. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
