MICROBIAL ALDOLASES AS C-C BONDING ENZYMES

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Investigation of structural-functional characteristics and application for stereoselective reactions | Carbon-carbon bonding enzymes can be attractive alternatives to standard chemical methods by allowing chiral control, taking advantage of mild reaction conditions and minimizing the use of protecting groups in reactions. Fructose-6-phosphate aldolase (FSA) from *Escherichia coli* catalyses reversibly the cleavage of D-fructose-6-phosphate into dihydroxyacetone (DHA) and D-glyceraldehyde-3-phosphate (GAP). In addition, the enzyme creates new building blocks with 3S, 4R configuration by use...
