Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Mill Building Construction The weight of steel in the sides and roofs of mill buildings, with out cranes, is from 4 lbs. To 6 lbs. Per square foot of exposed surface for the frame only. Corrugated iron sheathing weighs from 1 lb. To 2 lbs. Per square foot. These weights, with steel at 5 cts. Per lh., make the cost of steel buildings from 25 cts. To 40 cts. Per square foot of exposed surface. A rough approximate rule for calculating the extra weight of steel required in columns and girders when traveling cranes are used is as follows: Add 100 lbs. Of steel per lineal foot of building for every five tons of crane capacity. This would give for a 5-ton crane an addition of 100 lbs. Per lineal foot and for a 20-ton crane an addition of 400 lbs. Per lineal foot. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
